

A Holistic Approach to Vibration Energy Harvesting

Alex Weddell, 19 June 2012

Energy Harvesting Workshop, S2K 2012

Overview

- **Applications of Vibration Energy Harvesting**
- **Real Vibration Data**
- **Holistic Design of Energy Harvesting Systems**
- **Accelerated Simulation**
- **Case Study: Ferry Engine**
- **Contributions from Project Partners**
- **The Energy Harvesting Network**

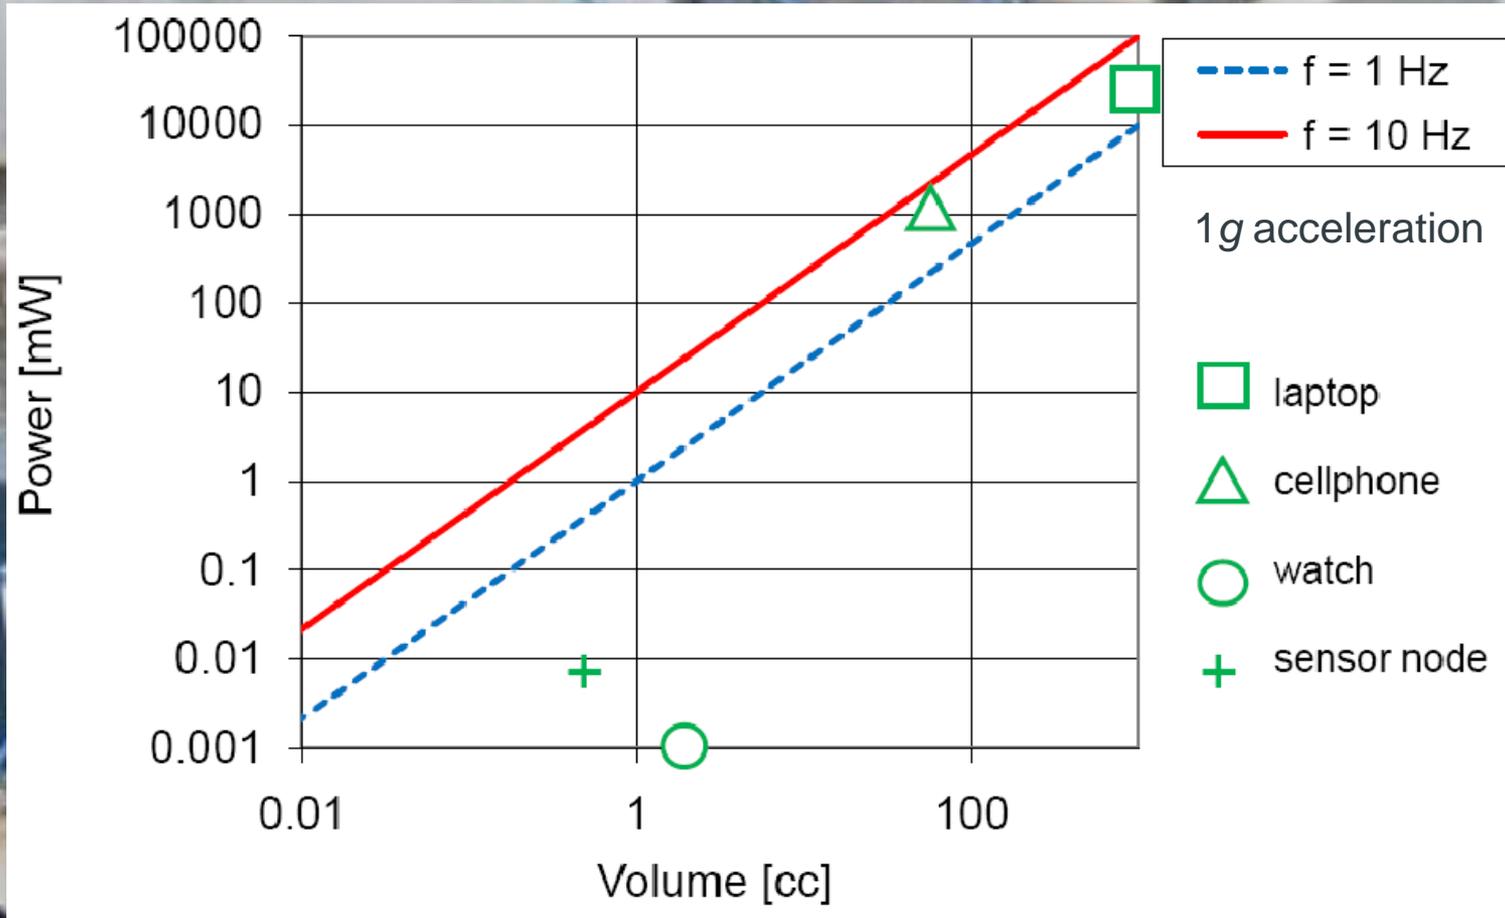

Applications of Vibration EH

- Typically condition monitoring, using wireless sensors
 - Sensors can be retro-fitted without electrician/batteries

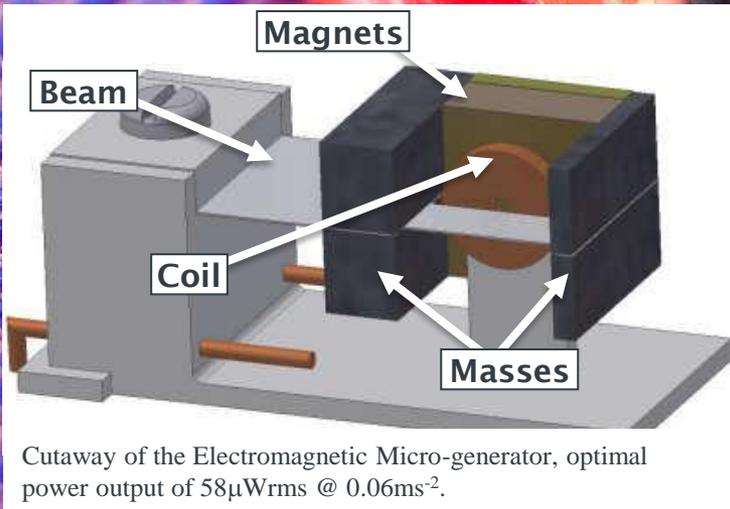

- Also applications in asset tracking, monitoring of rotating machinery, even human health monitoring

Limitations of Vibration EH

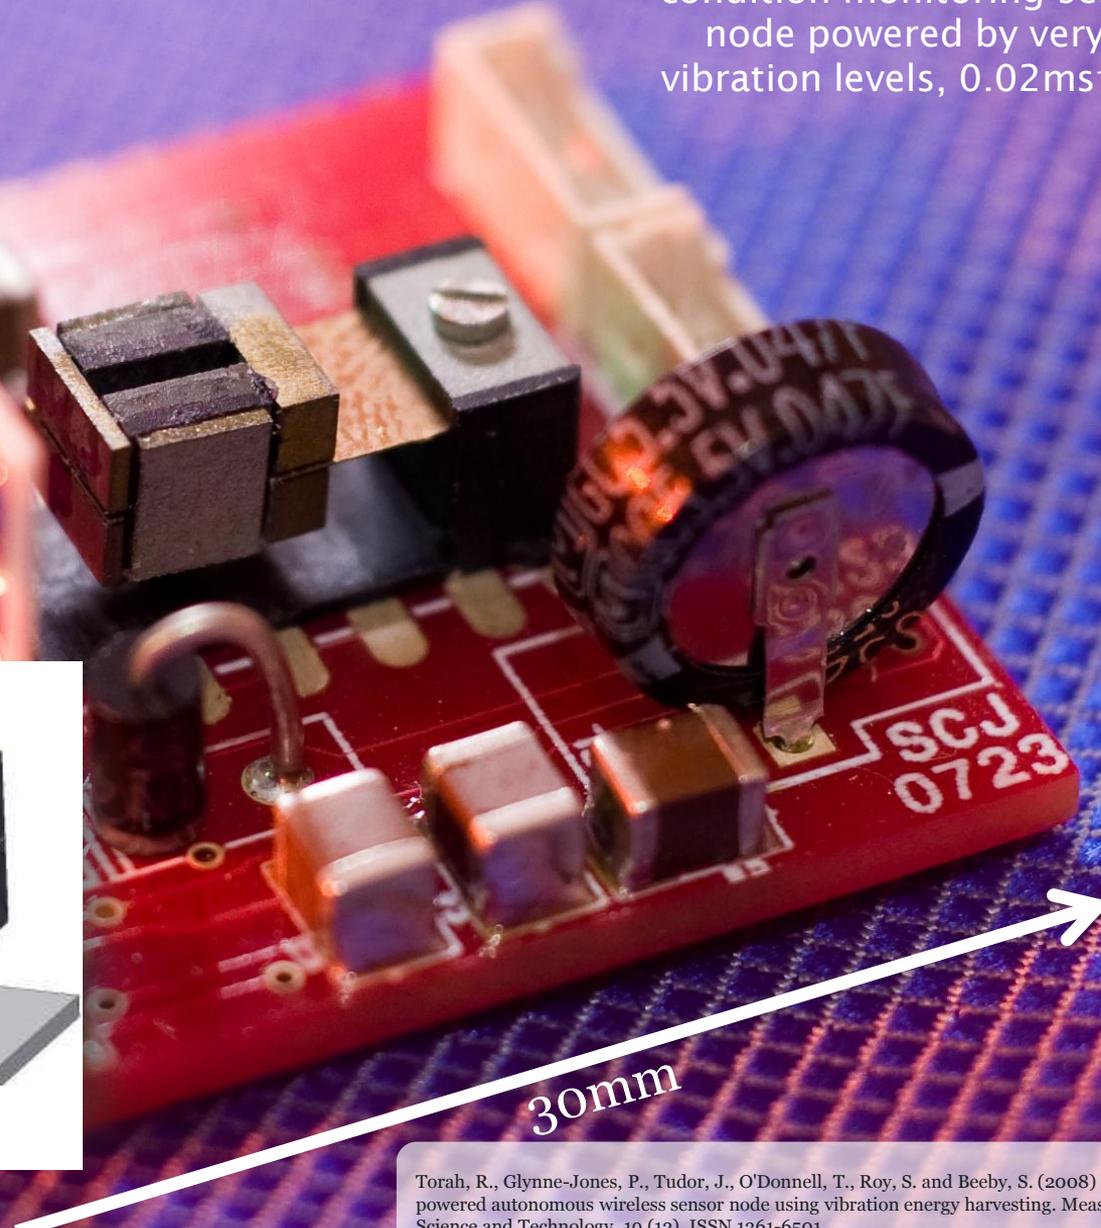

Starting Point

An energy-aware wireless condition monitoring sensor node powered by very low vibration levels, $0.02\text{ms}^{-2}_{\text{rms}}$

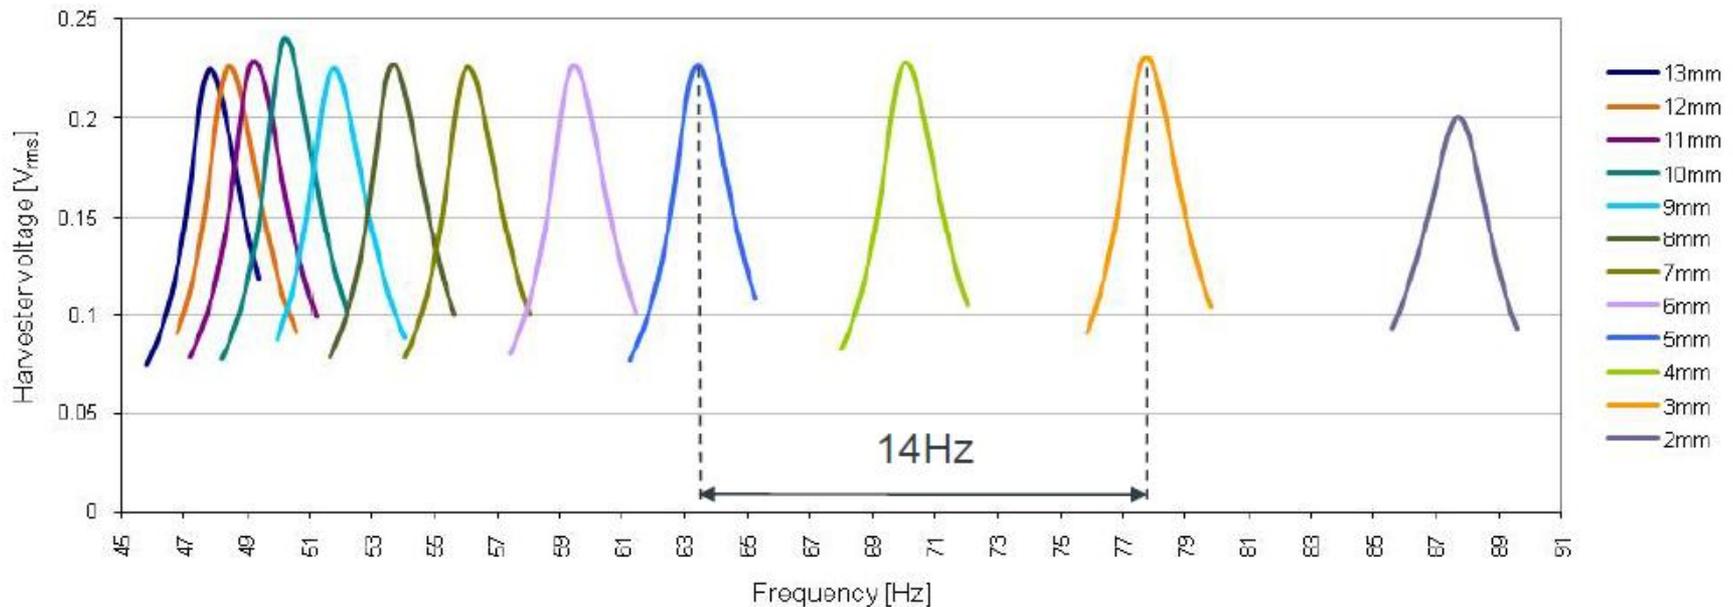

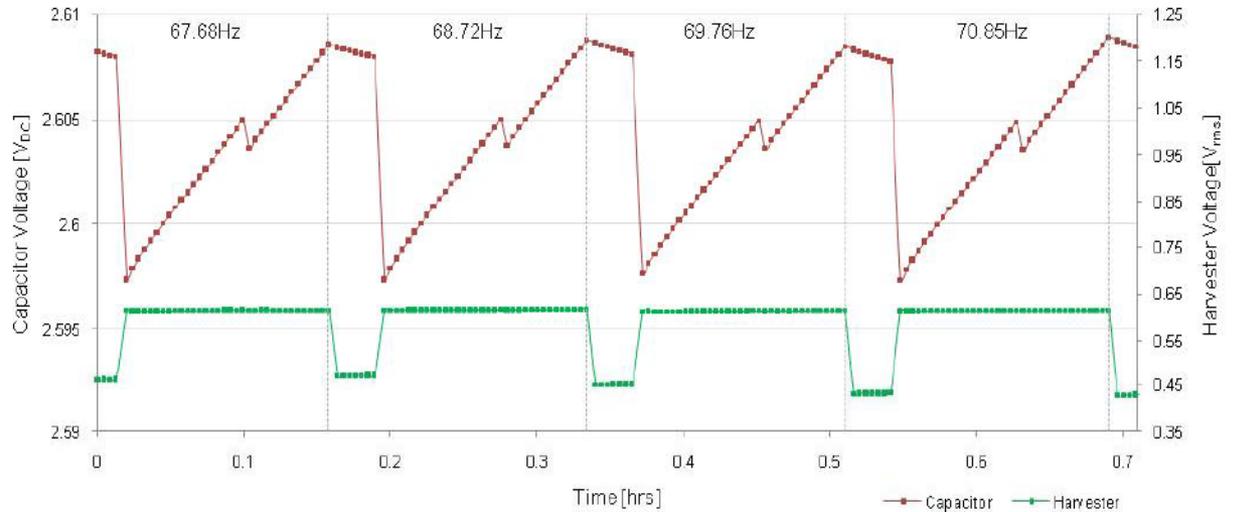

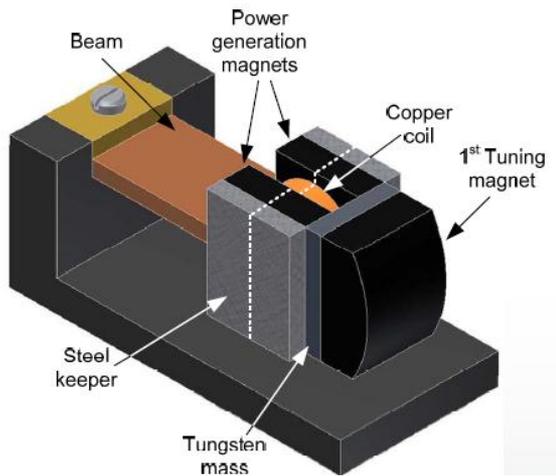

Cutaway of the Electromagnetic Micro-generator, optimal power output of $58\mu\text{Wrms}$ @ 0.06ms^{-2} .

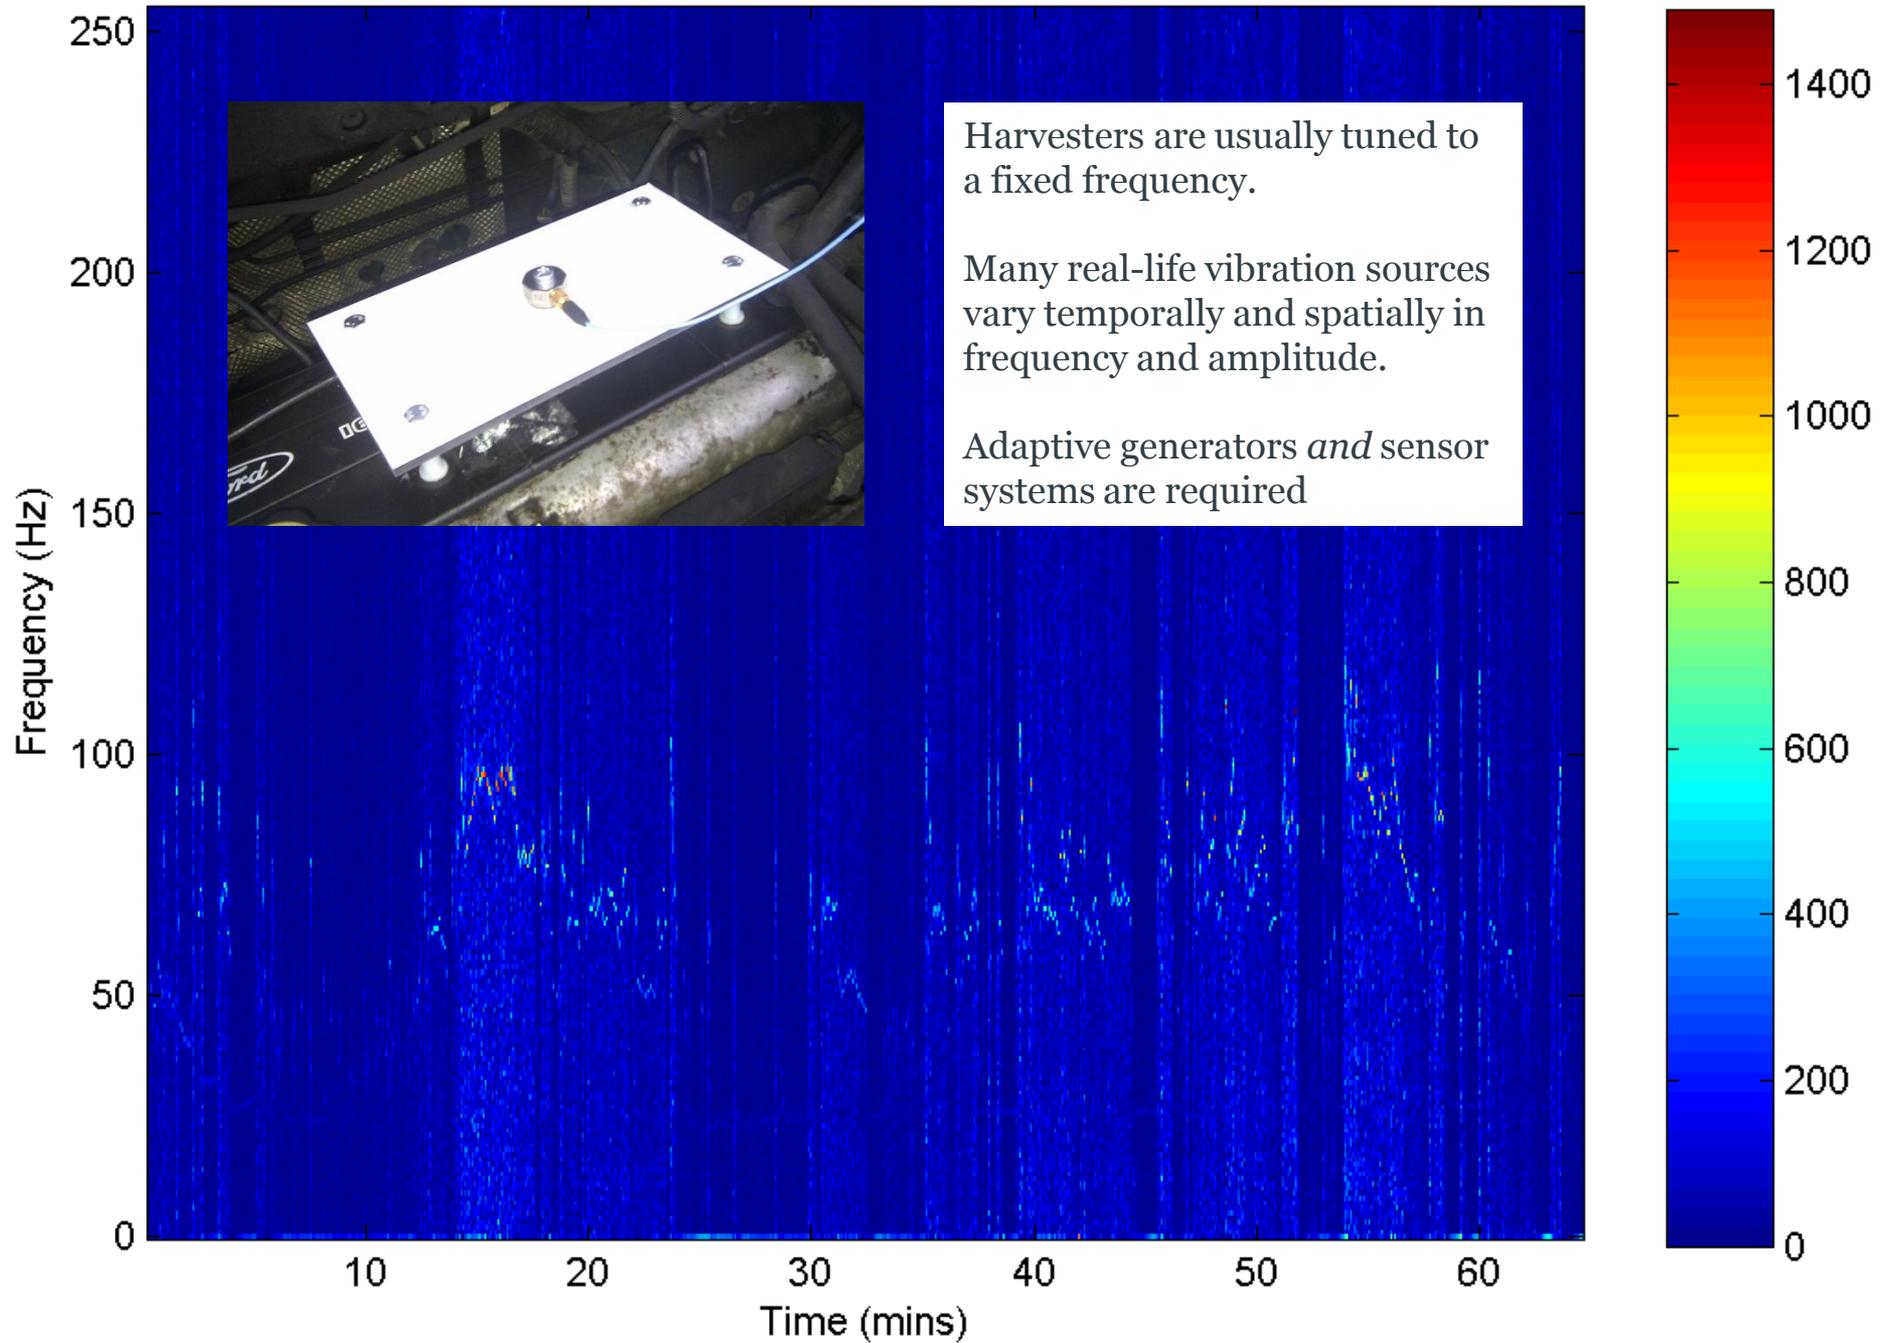

Torah, R., Glynne-Jones, P., Tudor, J., O'Donnell, T., Roy, S. and Beeby, S. (2008) Self-powered autonomous wireless sensor node using vibration energy harvesting. Measurement Science and Technology, 19 (12). ISSN 1361-6501

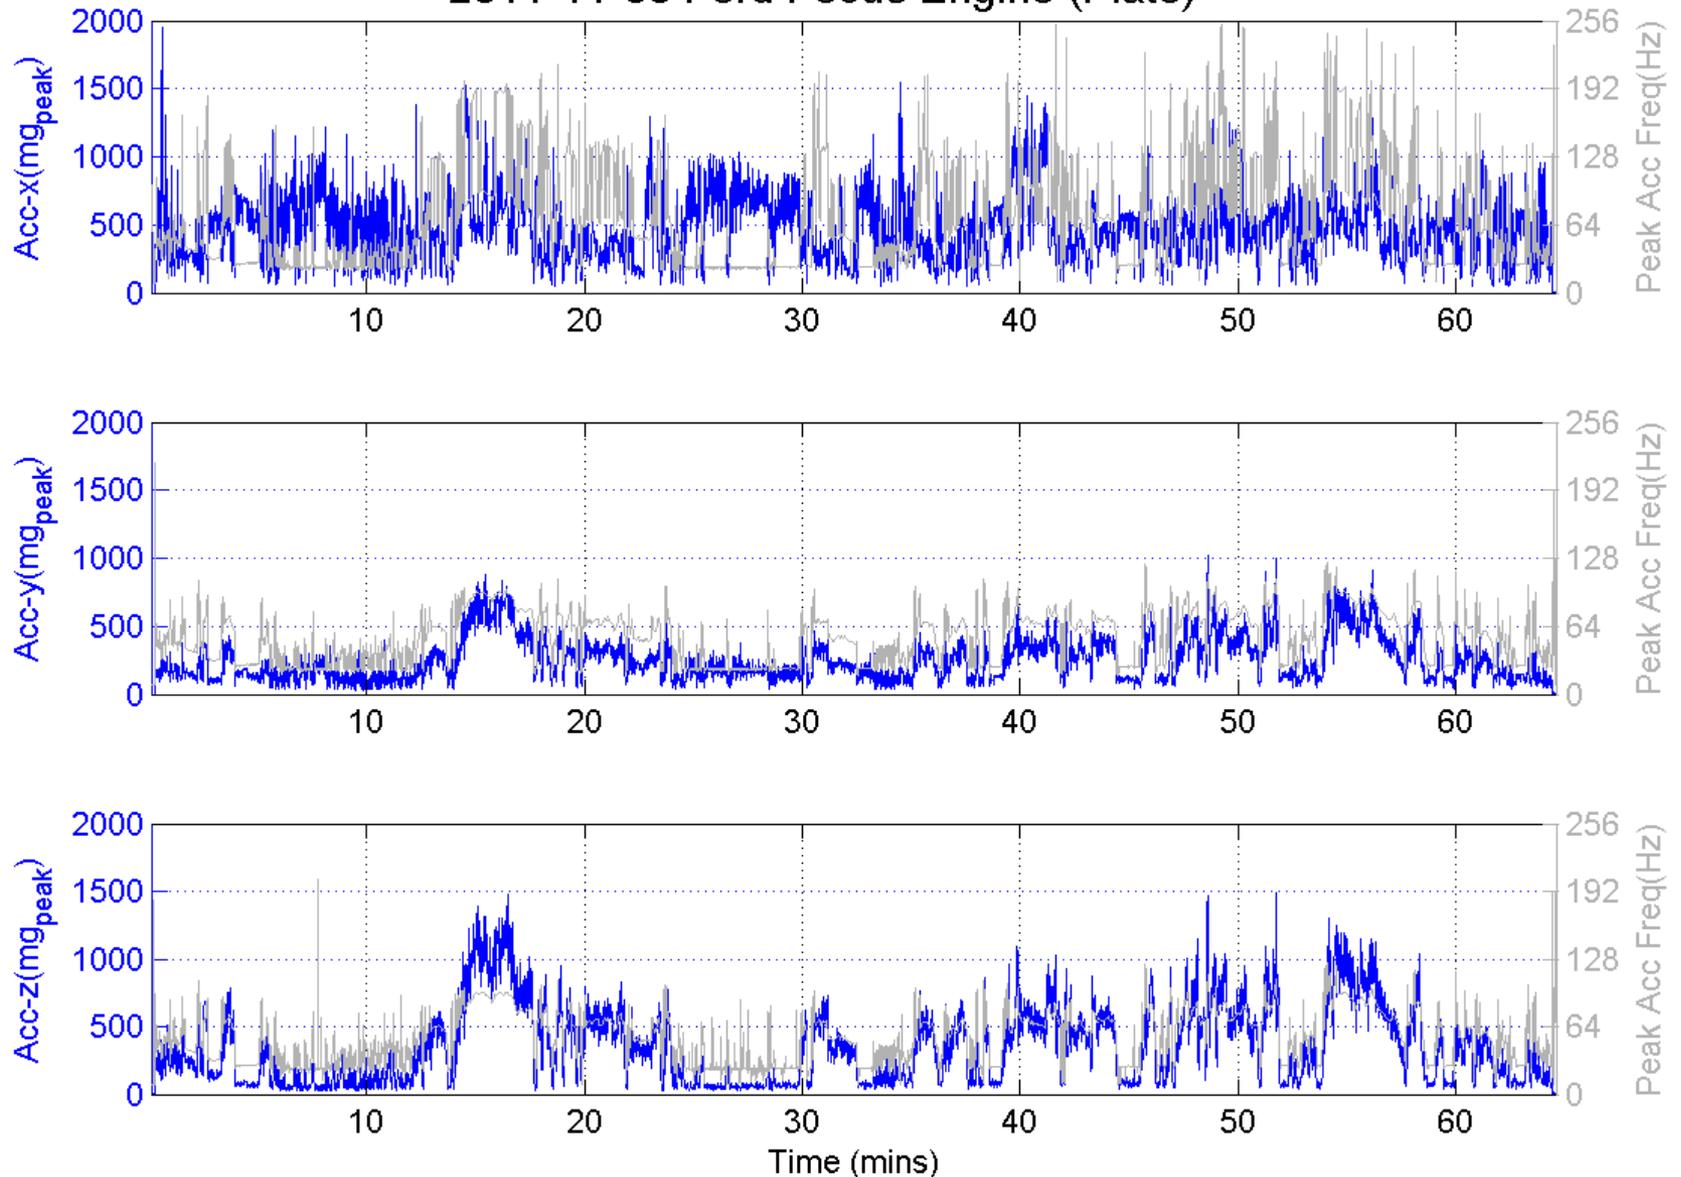

Southampton Tuneable Generator

Accel. (mg_{peak})

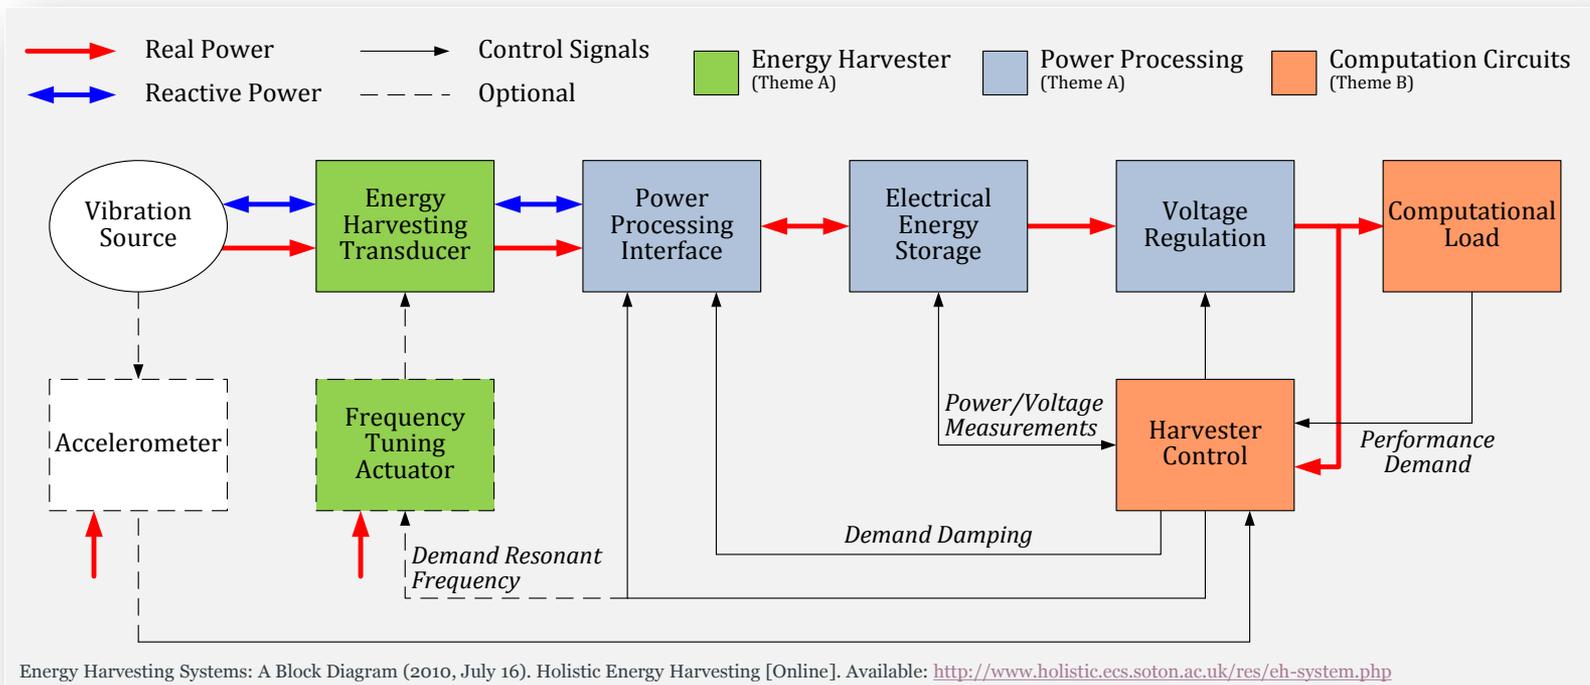

2011-11-08 Ford Focus Engine (Plate)

FFT interval 1s FFT length 1s Sample Rate 1024Hz Duration 3880s

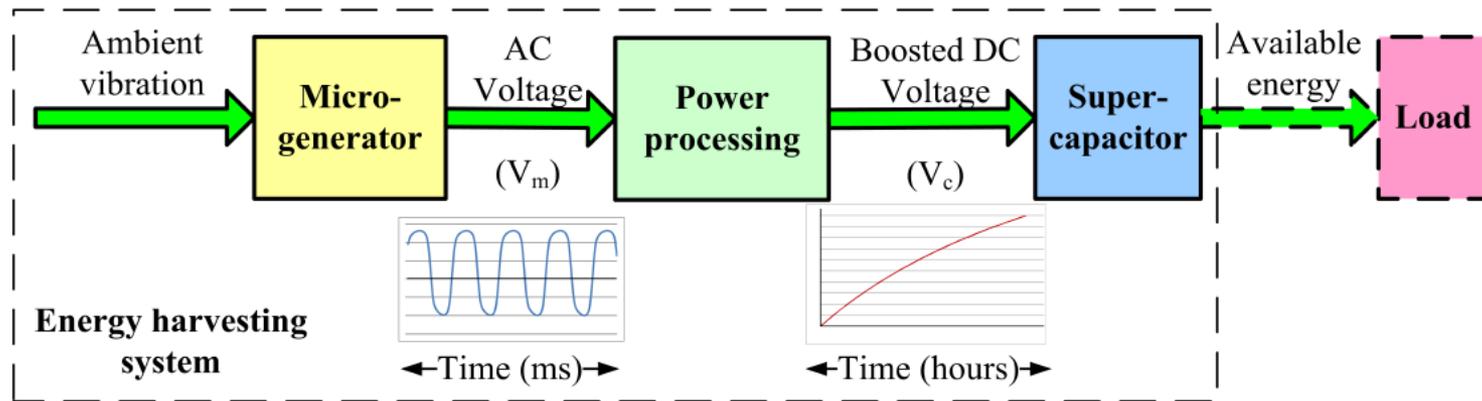

Holistic Design of EH Systems

- Design sub-systems, define interfaces, plug them together
- Few have considered interactions in the entire system.
- How do we design and model systems containing mechanics, circuits, devices, computation and algorithms?

Simulation and Optimisation

- EH-nodes are complex and hard to simulate

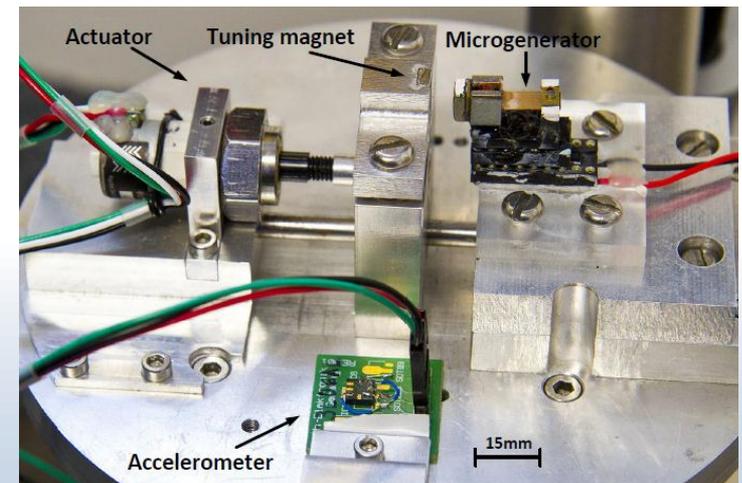

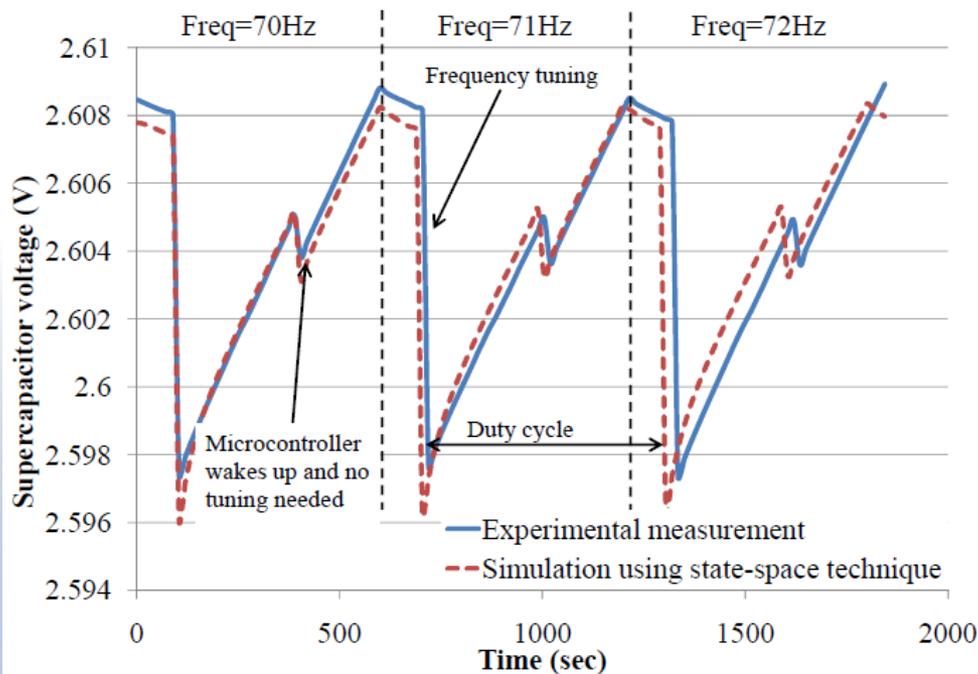

- Mix of long and short time-constants
 - Disparity between vibration (ms) & storage (hrs)

Simulation of the supercapacitor charging curve of an energy harvester			
Simulator	SystemVision (VHDL-AMS)	OrCAD (PSPICE)	Visual C++ (SystemC-A)
CPU time (P4, 2G RAM)	4h 24min	9h 48min	6h 40min

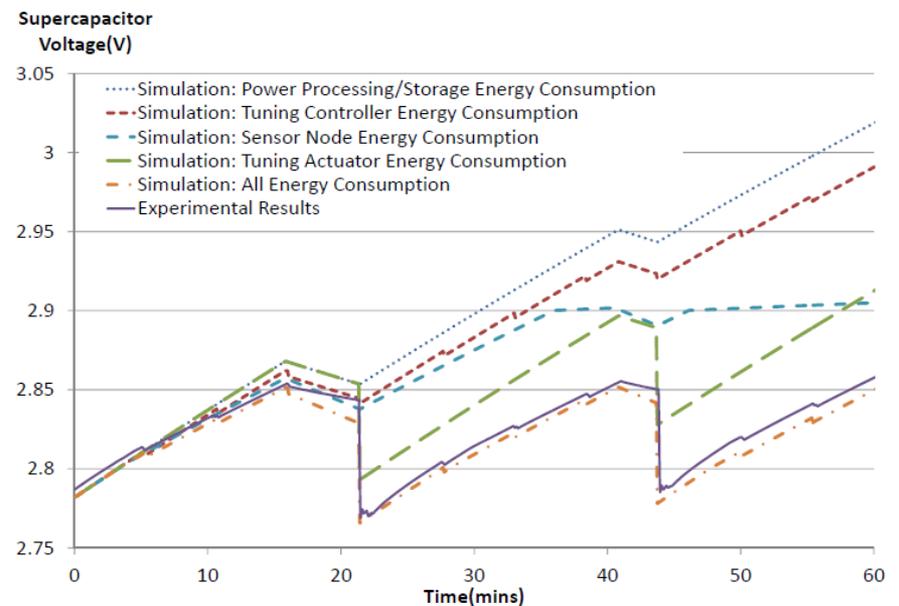

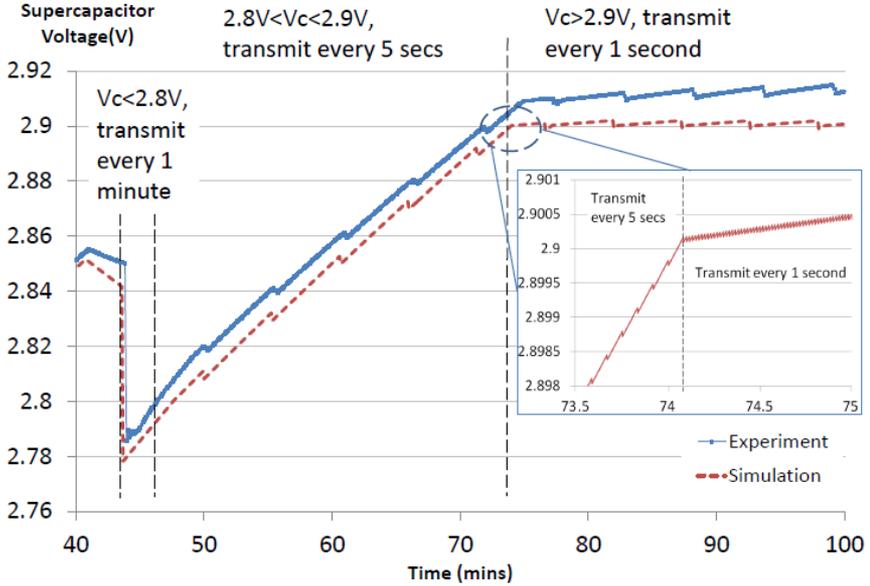

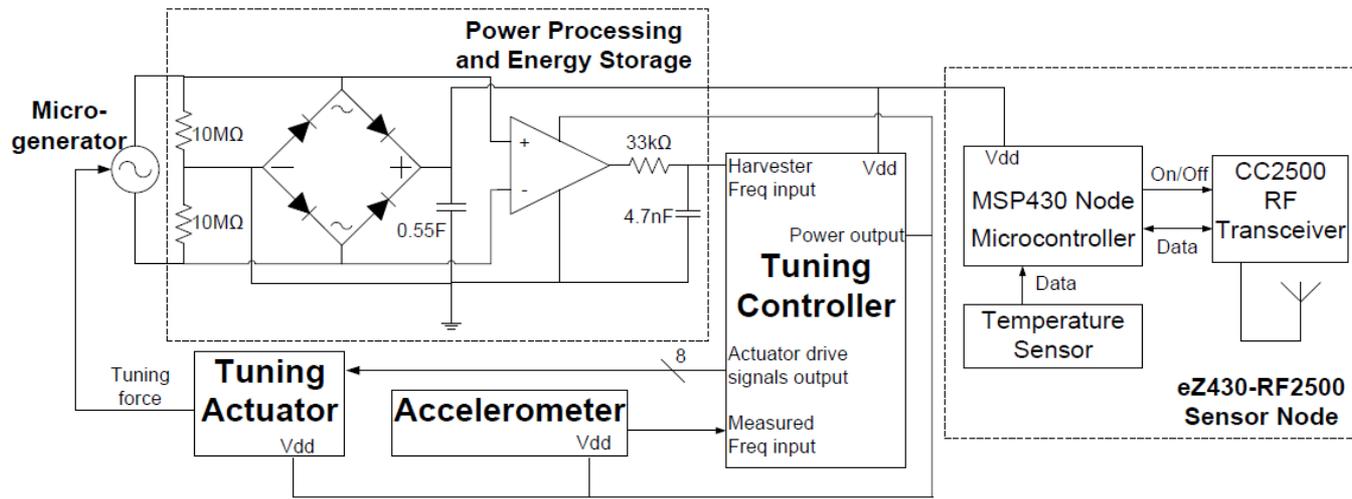

Increasing Simulation Speed

- Able to simulate complete tuneable EH systems
 - New simulation technique: accurate and 100x faster
 - Permits system optimisation, and potentially synthesis

	Existing technique		Proposed technique
Integration method	Implicit Newton-Raphson based		Explicit linearized Adams-Bashforth
HDL	VHDL-AMS	SystemC-A	
Scenario 1	2448 sec	3155 sec	23.3 sec

Simulating EH-WSNodes

EH-WSN Design Explorer

- Ability to explore a design in real-time
 - Energy-aware node, simulated for 10 hours

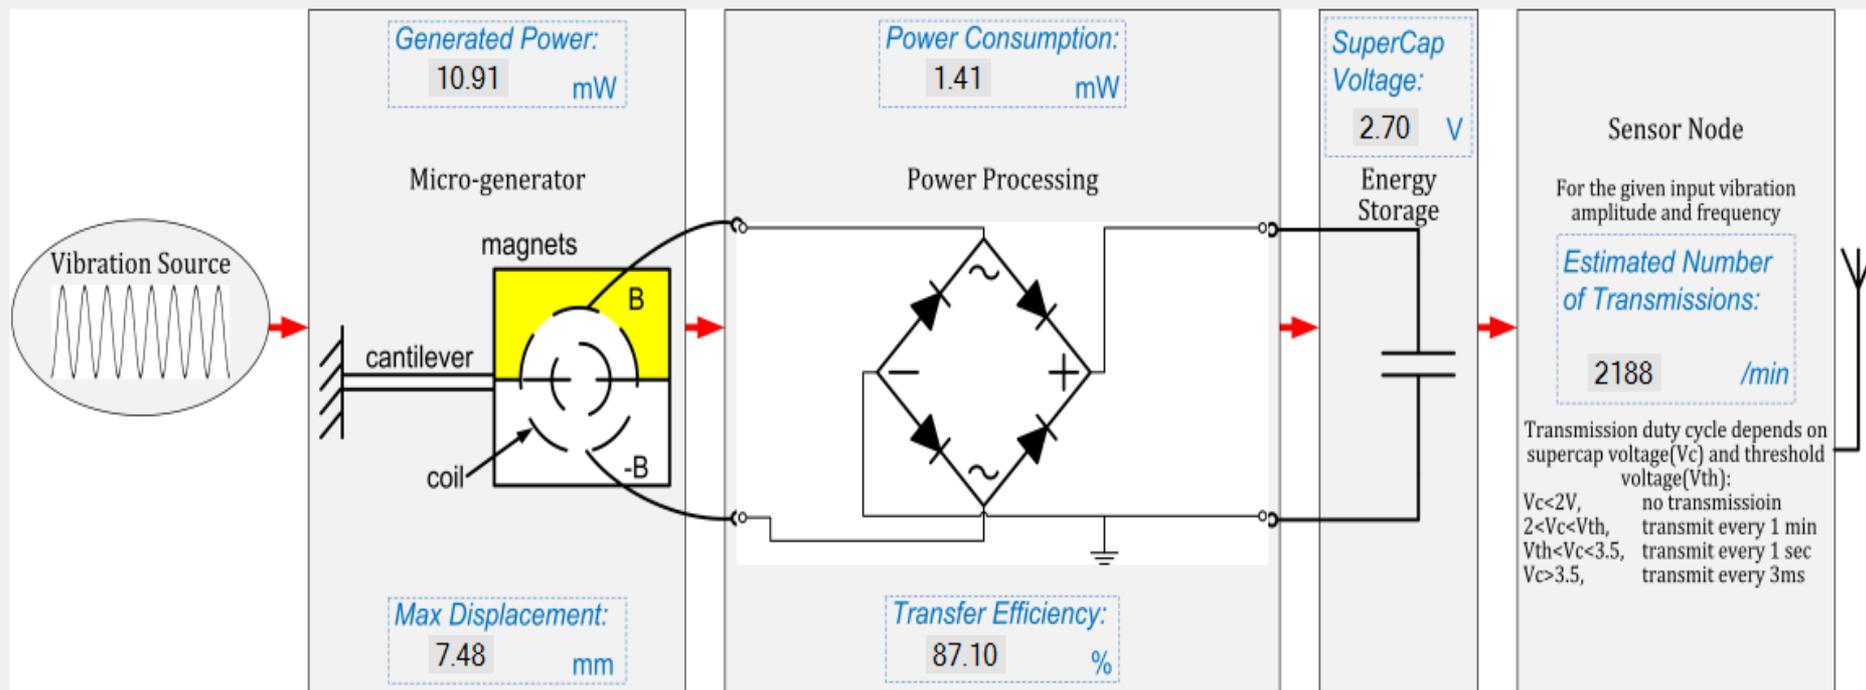

- 8 parameters
- 4 circuits
- 6 performance indicators
- RSM built from 180 simulations

	Vibration source	Micro-generator	Power processing	Storage	Sensor node
User parameters	Amplitude of sine wave	Proof mass	Diode bridge rectifier	Super-capacitor value	Threshold when transmission frequency changes
		Stiffness of cantilever	3-stage VM		
	Frequency of sine wave	Number of coil turns	4-stage VM		
		Mechanical Q factor	5-stage VM		
Performance indicators		Generated power	Power consumption	Super-capacitor voltage	Number of transmissions
		Maximum displacement	Transfer efficiency		

Performance estimator of wireless sensor powered by kinetic energy harvester

Back

User parameters

Peak Amp: 700 mg
(100~1000mg)

Freq: 50.00 Hz
(50~250Hz)

Proof mass: 2.0 g
(2~12g)

Number of coil turns: 2000
(500~5000)

Mechanical Q: 200
(100~500)

Cantilever

- Length: 10.00 mm
- Width: 2.00 mm
- Thickness: 150.0 um
- Material: Copper

Diode bridge

3-stage voltage multiplier
4-stage voltage multiplier
5-stage voltage multiplier

Resonant Frequency: 50.01 Hz

Operating Freq Range: 49.750 to 50.250 Hz

Super-capacitor value (0.1~1F): 0.55 F

Energy consumption per transmission (10~1000uJ): 116.0 uJ

SuperCap threshold voltage (2.5~3V): 2.50 V

The resonant frequency of cantilever is close to the input frequency. Performance indicators updated.

Engine Condition Monitoring

Engine Speeds

Idle (350RPM)

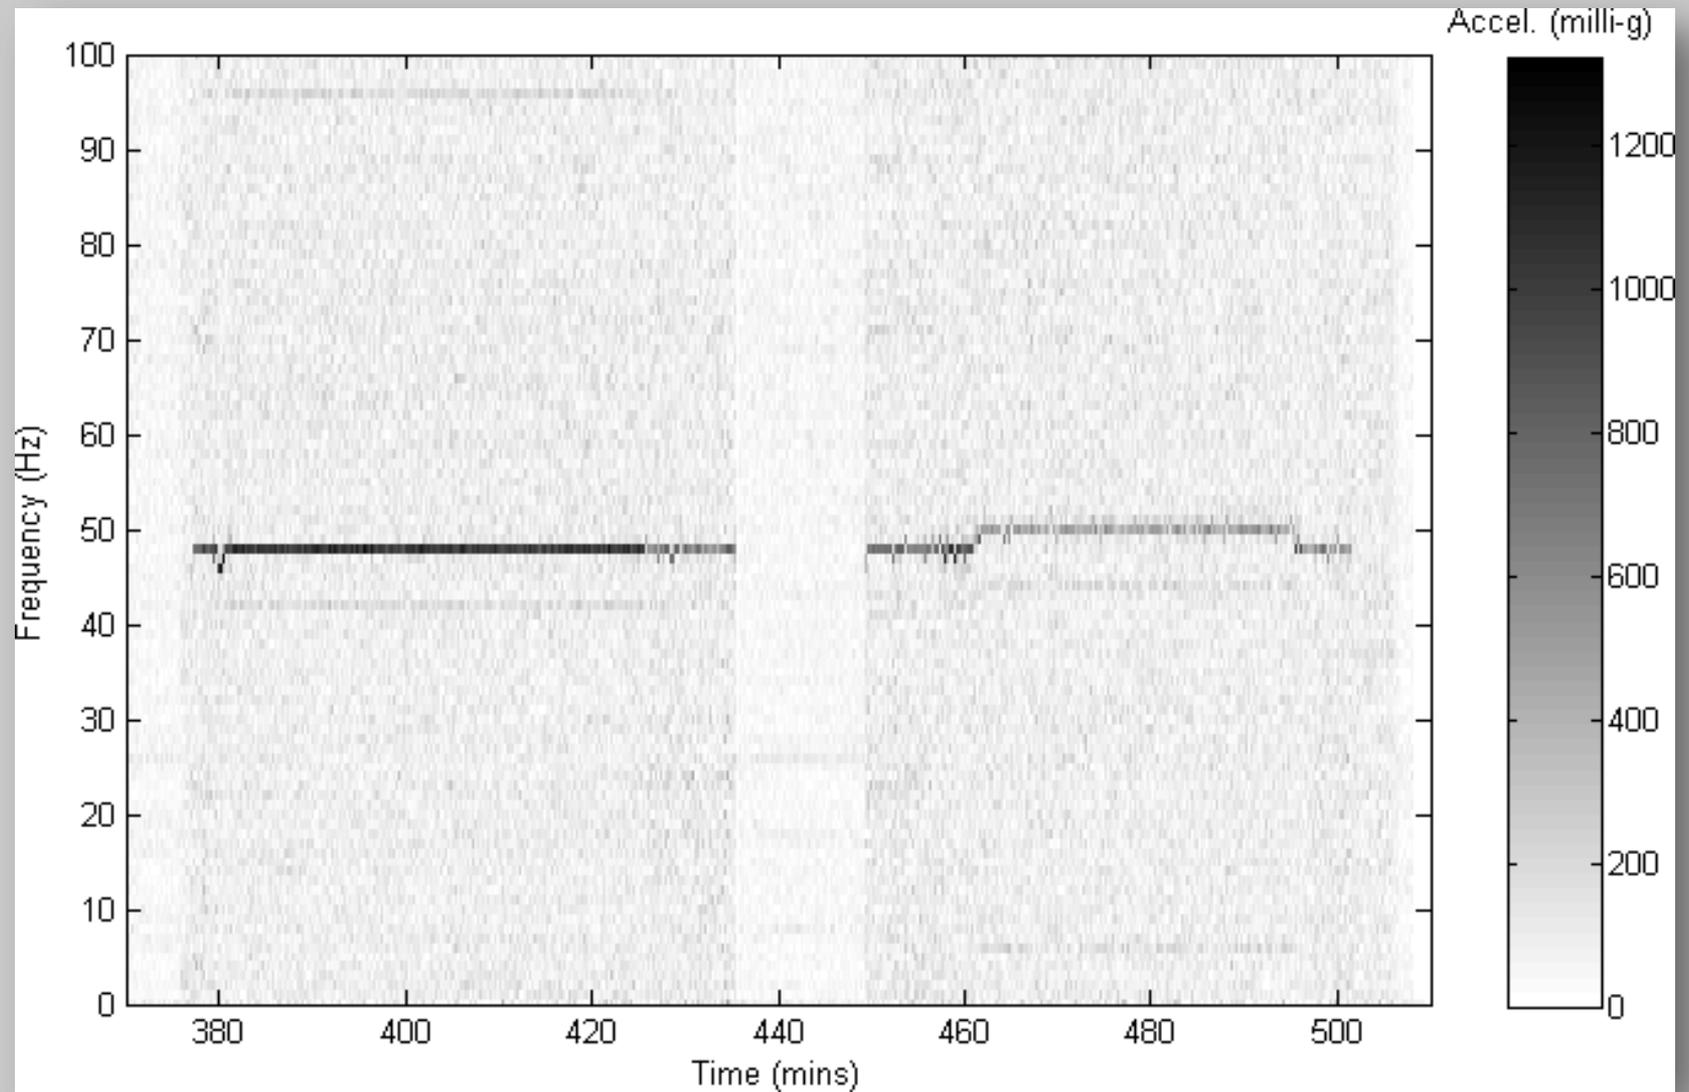

Slow (550RPM)

Normal (715RPM)

Fast (750RPM)

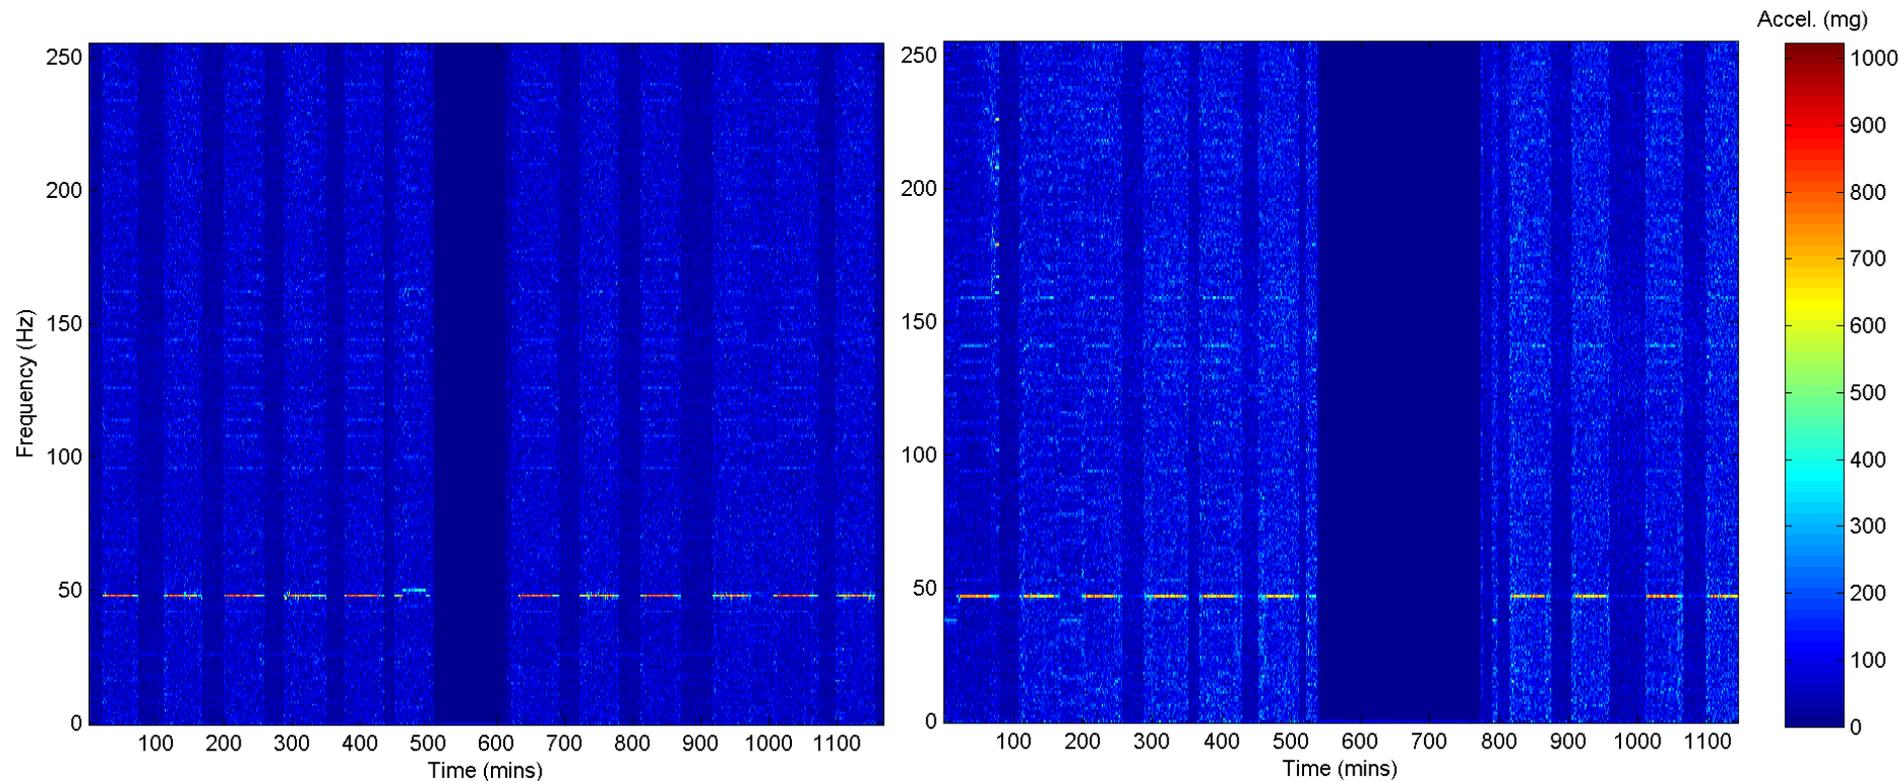

Acceleration Data

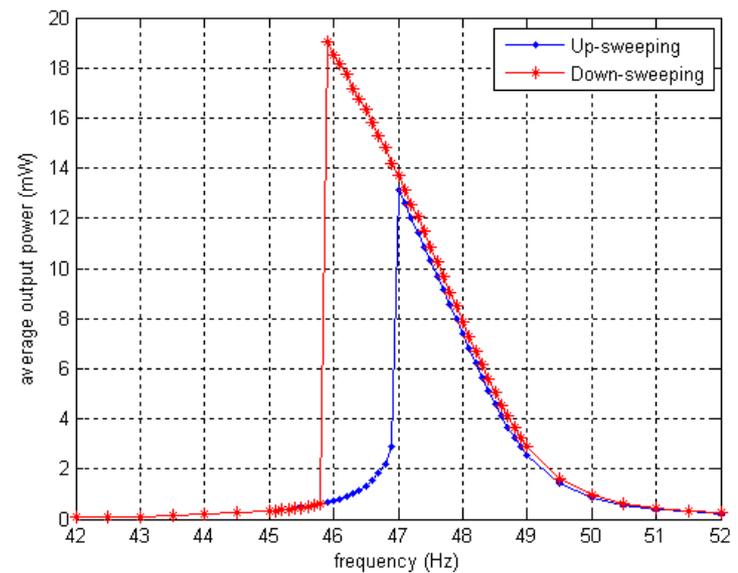

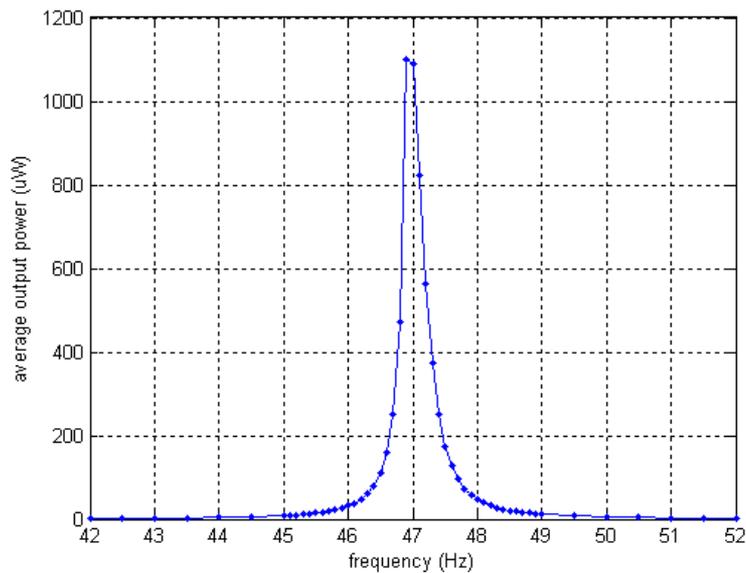

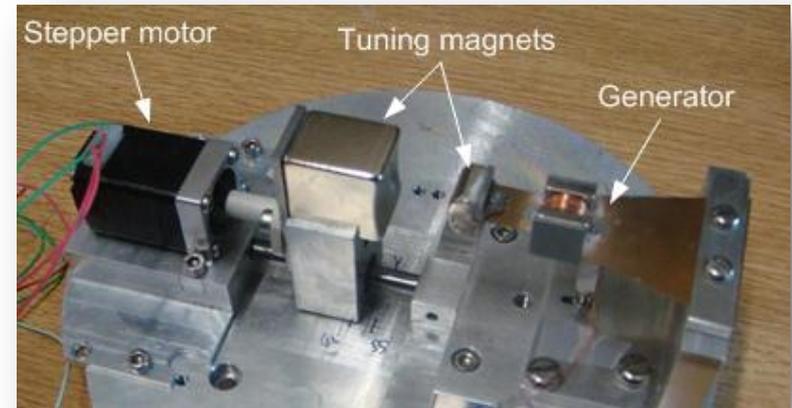

Long-Term Tests on Two Ferries

- Is the vibration signature similar on
 - different crossings, and
 - different ferries?

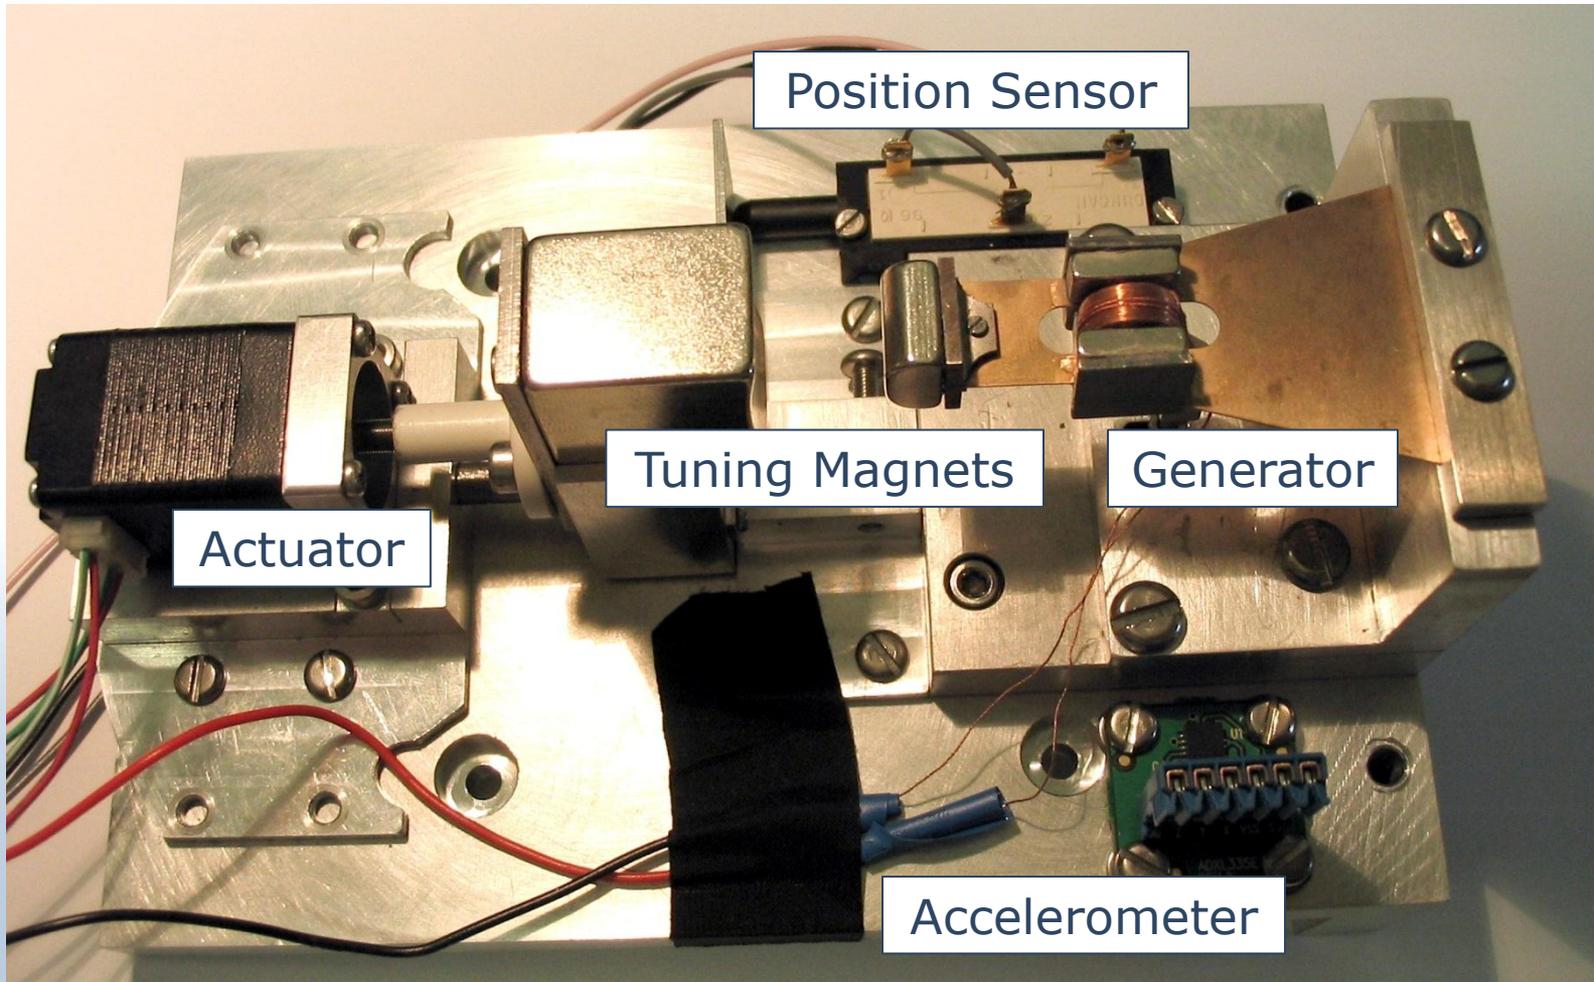

Tuneable Generator

- Specification
 - Frequency range: 42-55Hz
 - Max Amplitude 1 'g'

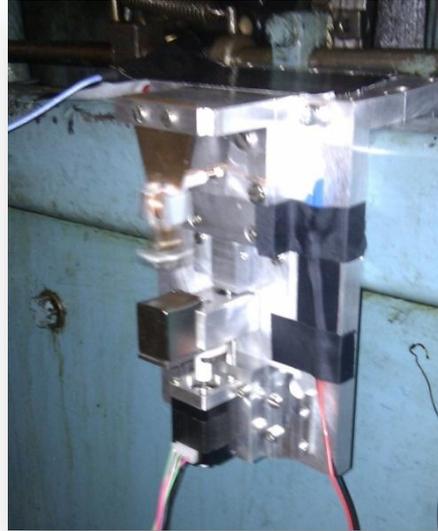

Power: $100\text{mg}_{\text{peak}}$, generator tuned to 47Hz

Tuneable Energy Harvester

Results

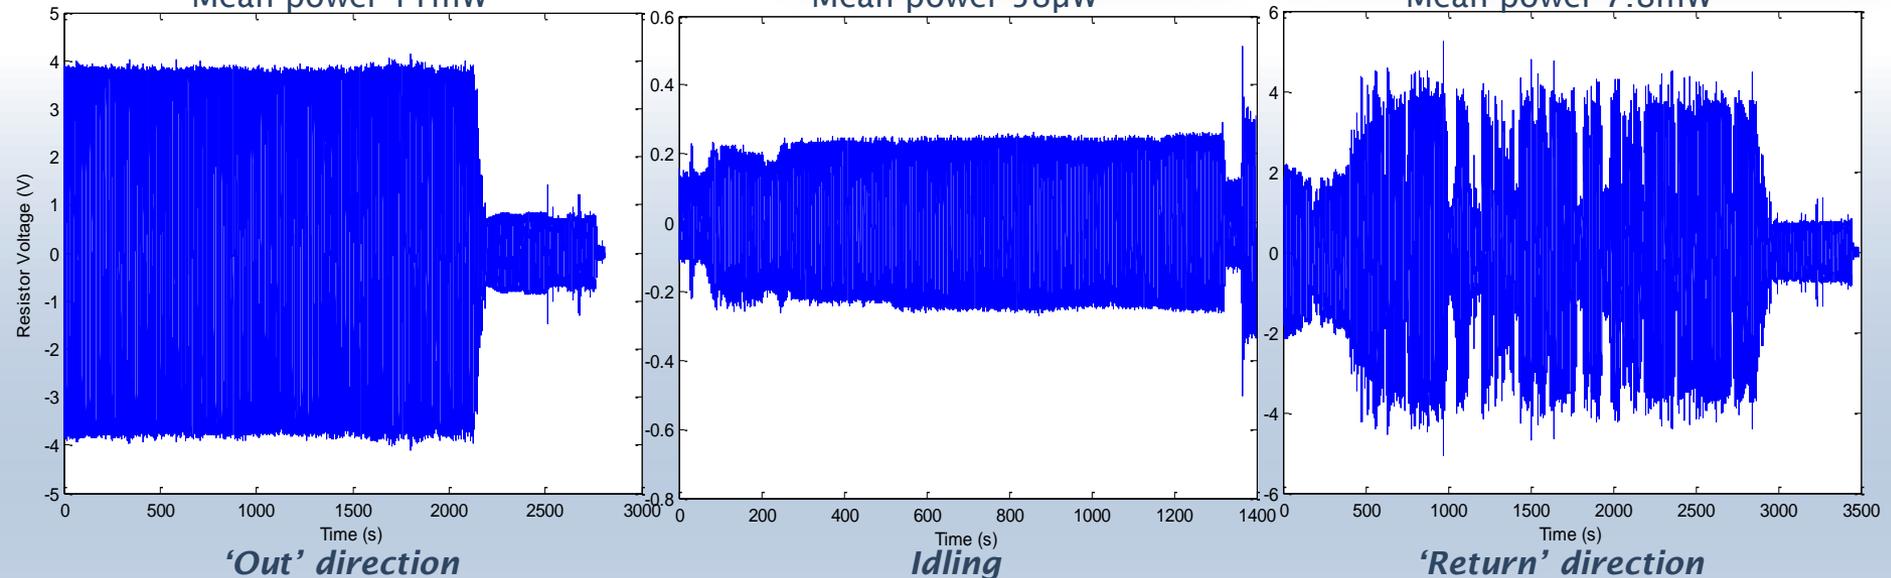

- Manually tuned
- 300Ω load

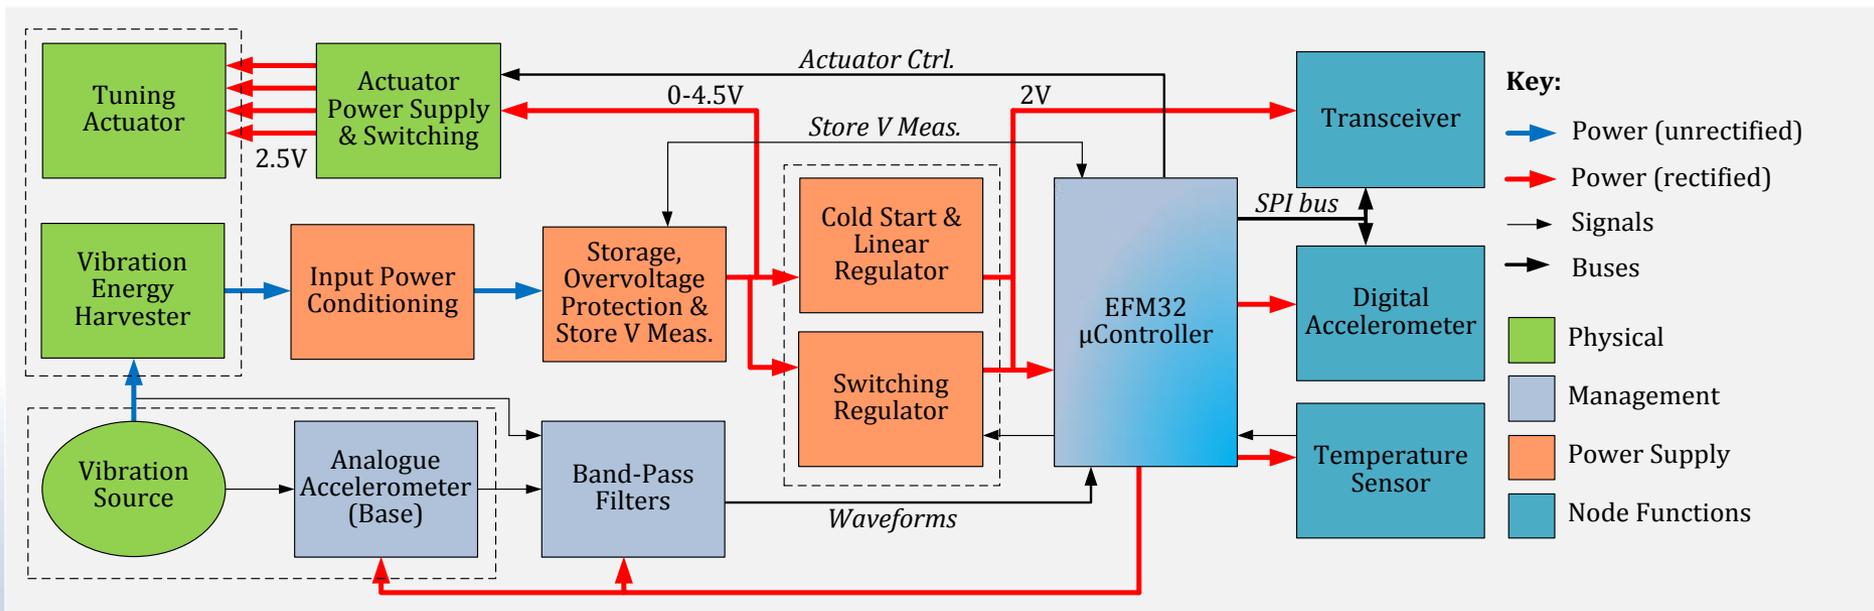

Mean power 11 mW

Mean power 58 μ W

Mean power 7.8 mW

System Diagram

Project Details

- £1.6M, three-year, EPSRC-funded project
- Kicked off in Q4 2009
- Over 25 people at four UK institutions:

EPSRC

UNIVERSITY OF
Southampton

**Imperial College
London**

- Industrial advisory board:

DIODES
INCORPORATED

ARM

dialog
SEMICONDUCTOR

**Mentor
Graphics**

Project Partners

- University of Bristol
 - Input power conditioning: maximise harvester utilisation
- Newcastle University
 - Asynchronous circuits for power-modulated computing
- Imperial College
 - Novel tuning mechanisms (including MEMS)

The EH Network: eh-network.org

- Started 01 March 2010, funded by EPSRC for 3 years
 - Motivated by UK/Europe's strength in EH, potential for new applications and to identify new research challenges
 - Objectives: define research challenges, catalyse collaboration, disseminate advances
 - UK Steering Board (academic/industrial)
 - 304 members in 243 companies/institutions worldwide, ~50/50 academia/industry
- **EH Network Data Repository**
 - An open-access EH database for researchers to download and share data
 - Wide range of sources – cars, bridges, ferries, humans, CHP, machinery etc

Energy Harvesting

Events

This page contains news and events that we believe are of interest to the community. If you wish to contribute, please follow the instructions at the bottom of this page.

Upcoming Events

26/Jun/2012: IInet Innovation Lab: Energy Harvesting
Interested in exploring new or innovative applications for your ideas and capabilities, or existing products and services? The Microelectronics Inet is actively seeking to provide financial support and free business services to projects relating to the development of new technologies in Energy Harvesting.

23/Jul/2012 - 27/Jul/2012: Summer School on Energy Harvesting at Micro and Nanoscales
This year, the NPS Summer School is being held in Erice, Sicily (IT) on July 23-27, 2012. The school is devoted to "Energy harvesting at micro and nanoscales" and also has a one-day International Workshop on "Energy harvesting: models and applications".

Previous Events

22/May/2012: Battery Free Wireless Sensing and Communication Systems For Structural Health Monitoring
Cranfield University invites you to join them for a one-day event on high performance power harvesting demonstrations for battery-free wireless sensing and communication systems focused on structural health monitoring applications. You will have an opportunity to see energy harvesting demonstrations of Cranfield's cutting edge research activities in this area.

15/May/2012 - 16/May/2012: Energy Harvesting & Storage and Wireless Sensor Networks & RTLS Europe 2012
Learn about the diverse range of energy harvesting and storage technologies, their

Latest News

News: Internships at EnOcean GmbH, Munich & Project Support
EnOcean is pleased to announce that they are launching a new Internship Program for Engineering Students at its headquarters in Munich. These placements run for one year with a follow-on one month handover, and will provide an outstanding learning environment for motivated Students. During Q3 2012, EnOcean will also begin supporting Universities W...

News: Call for SPARK Awards 2012: Materials for Energy Harvesting
An OEH is seeking innovative technology in the area of energy harvesting in order to seek to power products in the absence of mains electricity, but still allow for the collection and transmission of data. SPARK Award projects, launched by the Materials KTI in collaboration with and funded by an OEH to help supply chain companies accelerate the dev...

News: Webinar - What Can Energy Harvesting and Wireless Sensor Do For You?
IDTechEx invite you to join Dr Harry Zervos from IDTechEx for a free webinar on Tuesday 20th March, when he will ask: What Can Energy Harvesting and Wireless Sensors Do For You?

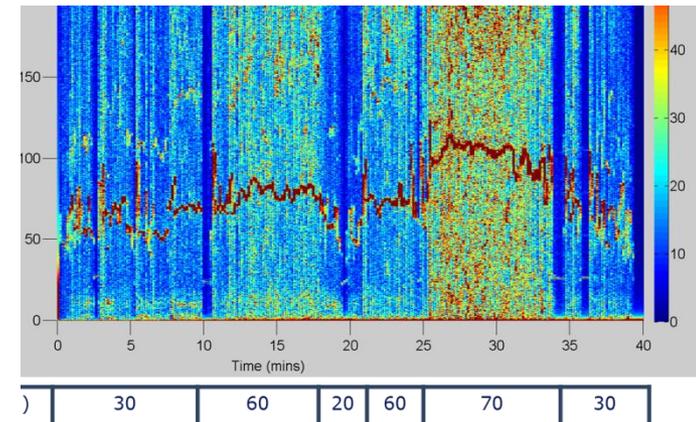

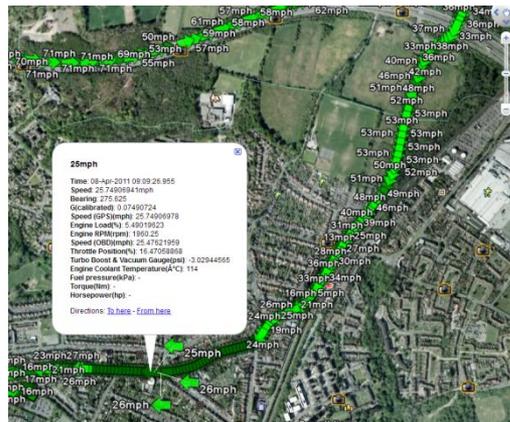

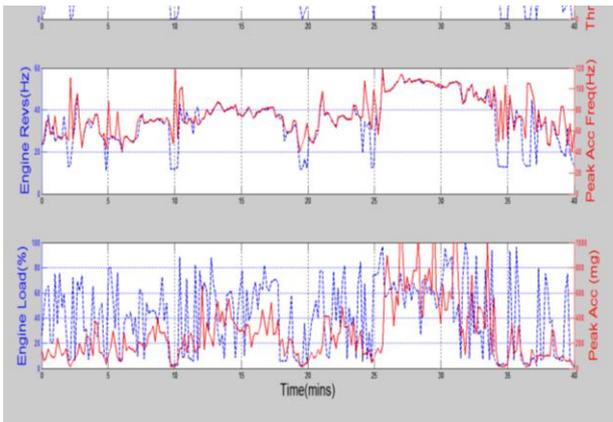

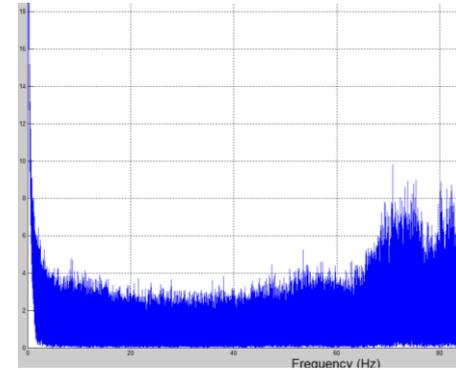

News: Launch of the EH-Network Data Repository
The Energy Harvesting Network has just launched the EH-Network Data Repository - an online repository to provide a common resource for researchers to share data on energy availability.

News: Energy Harvesting in Government's Strategy for Growth
The UK Government's strategy for research and innovation (published December 2011) explicitly recognises energy harvesting as an area for investment. Further information can be found by downloading the full report via the link below.

News: Research Post: Energy Harvesting (Tyndall)
Tyndall heterogeneous systems integration group have an opening for a post doctoral fellow with experience of using piezoelectric materials to create energy harvesting devices which are compatible with CMOS fabrication technologies.

Events: Workshops and Conferences

- 3 workshops to define new challenges: human power, structural monitoring, and MEMS/NEMS
 - Road-mapping reports available to download from the Network's website
- Energy Harvesting 2011 (EH Network's annual conference) was held in February 2011 (London)
- Energy Harvesting 2012 was held in March 2012 (London)
 - ~100 attendees, 12 presentations (academia/industry), 10 PhD posters, 5 company stands
 - Will be held again next year – join to find out more!
